

BACKGROUND & PROBLEM

Israeli families face three critical gaps during rocket alerts: no digital tool to confirm all family members reached safety, acute anxiety during the mandatory 10-minute shelter stay, and a lack of routine preparedness training. Existing apps focus only on detection and alerts — leaving families without support once the siren sounds.

MAIN GOAL

SaferTogether transforms emergency shelter time into a structured, calm, and connected experience — helping families confirm safety instantly, reduce anxiety through gamification, and detect stress levels using AI-driven behavioral analysis.

KEY FEATURES

- ✓ Real-Time Check-in – instant visual confirmation that all family members reached safety.
- 🎮 Gamification Module – mini-games to reduce anxiety and maintain engagement.
- 🤖 AI Stress Detection – analyzes touch dynamics & motion to classify anxiety levels.
- 📍 GPS Location Sharing – live location visible to group admin during emergencies.
- 🔔 Pikud HaOref Integration – alerts synced with Israel's Home Front Command API.
- 👤 Avatar System – personal avatar customization built in Unity.

TECH STACK

- React Native – cross-platform mobile app
- ⚙️ Node.js + Socket.io – real-time server
- 🗄️ Supabase – database & authentication
- 🎮 Unity – mini-games & avatar system
- 🤖 Python + Random Forest – AI stress detection
- 🚨 Pikud HaOref API – emergency alerts
- 🛠️ GitHub – version control

SYSTEM REQUIREMENTS

- Instant Alerts – Pikud HaOref integration
- ✓ Group Check-in – under 10 seconds
- 📍 Live GPS – real-time location sharing
- 🎮 Mini-Games – active during shelter stay
- 🤖 AI Stress Detection – touch & motion analysis
- 🔒 Secure Auth – via Supabase
- 📱 Cross-Platform – Android & iOS

APP SCREENSHOTS

Each user designs their own avatar.

The color of the Home Front Command symbol indicates to the user the GPS status and defense status.

- GPS is connected and there are no active alerts
- GPS is connected and there are active alerts in another area
- GPS is connected and there are active alerts in the user space
- GPS is not connected

A true alarm has been triggered.

Upon receiving a live rocket alert, the app immediately notifies all group members. Each user must actively confirm they have reached a protected space — only then is their status marked as safe for the group admin.

AI Stress Analysis Dashboard – real-time behavioral data sent to group admin

Gamification Module – To reduce anxiety during the mandatory shelter stay.

- Puzzle game – Choose what to bring to the shelter. Measures response time, errors & tremors.
- Door Keypad – Reproduce a growing sequence of digits. Measures memory, errors & tremors.
- Missile Dodge – Dodge missiles by swiping. Measures reaction time & movement patterns.
